

Technical Data & Instruction Sheet

PRODUCT BENEFITS

Strong adhesion to all surfaces used in building

Excellent durability and resistant to ageing

High adhesion on deformable substrates

No vertical slip

Meets European standards EN12004: 2007 R2T

RECOMMENDED SURFACES

Substrate/Bases		
Mineral screeds, Cement-based screeds		
Concrete, Cement plasters and		
Cement-lime mortar, Cement fiber		
board		
Gypsum, Gypsum board, Gypsum panels, Ply Board		
Floors and Walls in Glazed tiles,		
Cement-based and resin floor tiles,		
Porcelain tiles		
Wood, Metals, Glass, PVC, Linoleum		

TECHNICAL DATA

Pot life	60 minutes
Open Time	60 minutes
Adjustability	90 minutes
Vertical Slip	<0.5mm
Light Foot Traffic	24 hrs
Interval Before Use	3 days
Tensile adhesion to Metal	>1.5Mpa
Tensile Adhesion	> 3Mpa
to concrete	(concrete failure)

AVAILABLE SIZE

Part A: 6.4 kg, Part B: 1.6 kg

COVERAGE

2-4 Kg/mtr² (depending upon the substrate)

SHELF LIFE

1 year

DESCRIPTION

ADFLEX 206 is a two component Polyurethane modified epoxy resin based flexible adhesive with high adhesion strength. It is used for laying of ceramic tiles, porcelain tiles, natural and synthetic stones, on floors and walls, on absorbent and non-absorbent, deformable substrates. It can be used in both interior and exterior application.

DIRECTIONS

Read entire label before using. Use only as directed. Always test on a small area to check desired results. Make sure surface is clean and free of waxes, dirt and coatings. Ensure proper and thorough mixing of resin (PART A) and hardener (PART B) before applying. Do not mix any solvents.

METHOD OF APPLICATION

Substrate Preparation

- 1. All substrates must be compact and consistent.
- Substrate should be properly cleaned to free from dust, oil and grease, and free from any rising dampness. The substrate must be stable, without cracks and have already completed the recommended curing period.
- 3. Uneven areas must be corrected with suitable smoothing and finishing products.

Mixing

- 1. ADFLEX 206 is prepared by mixing together parts A and B using a low speed electric agitator, in the ratio of Part A: Part B :: 6.4 : 1.6. Avoid overheating of the blend during mixing which would reduce working time.
- 2. Pour part B into the bucket containing part A. Be careful to mix the two parts uniformly until a smooth, even coloured mixture is obtained.

Application

- 1. Spread ADFLEX 206 onto the substrate using a suitable notched trowel. If the adhesive is used for bonding special tile, also fill the gaps on the back of the piece with ADFLEX 206 before laying. The pieces to be bonded should be pressed together to guarantee good buttering. Once set, the bond will be very tough.
- 2. The surrounding temperature affects the hardening time of the product. At 23°C it is adjustable for approximate 1 hour, and this time reduces as the temperature increases.

Cleaning

Residues of AdFlex206 can be cleaned from tools and covered surfaces with RachTR XC3 while the adhesive is still fresh. Once cured, the adhesive can be removed by RachTR XC4 and mechanical means.

Storage and handling Instructions

- 1. May be harmful if swallowed. May cause skin, eye and respiratory irritation.
- 2. Use in a well ventilated area.
- 3. Do not ingest.
- 4. Do not freeze or store above 40° C.
- 5. Do not mix with other chemicals.
